Krushmi Sanjay Madkaikar

Analytics Professional | 571-668-3405 | krushmimadkaikar@gmail.com | linkedin.com/in/krushmi-madkaikar | Open to Relocation

Professional Summary

Analytics professional with 5 years of experience in pricing, supply chain, financial and market analytics. Turns complex, multi-source data into reports, forecasts and dashboards that drive pricing, inventory and operational decisions. Skilled in SQL, Python, Power BI and Tableau, with hands-on experience in Snowflake, Azure Databricks and Azure Synapse. Strong in requirements gathering, stakeholder management, UAT and process improvement. Automated 20+ recurring reports at Dye Capital, reducing manual reporting work by 40% and improving turnaround by 30%. Experience across retail, supply chain, nonprofit, automotive and government contracting.

Core Competencies

Business Analysis · Pricing Analytics · Supply Chain Analytics · Inventory and Demand Planning · Profitability and Margin Analysis · Market Research · Financial Analysis (FP&A) · Data Analysis · Business Intelligence · Dashboard Development · SQL Query Optimization · ETL/ELT · Data Modeling · Data Quality and Validation · KPI Development · Forecasting · Requirements Gathering · UAT · Root Cause Analysis · Process Improvement · Stakeholder Management · Agile/Scrum

Key Achievements

- Automated 20+ recurring SQL reports and Power BI dashboards at Dye Capital, cutting manual reporting work by 40%.
- Identified a potential 10% revenue lift through pricing, profitability and promotion analysis.
- Improved reporting turnaround by 30% with Power BI semantic models and standardized KPIs.
- Uncovered about 15% in efficiency gains by aligning metric definitions across Finance, Marketing, Supply Chain and Operations.
- Helped grow donations by 10% at Changing the Present through donor and campaign analytics.
- Reduced manual reporting by 35% and repeat reporting errors by 20% at Volkswagen Group of America.

Technical Skills

- **Programming and Data Processing:** Python (Pandas, NumPy), R, SQL (SQL Server, MySQL, Oracle, Snowflake SQL), Advanced Excel, Power Query
- **Data Engineering and ETL/ELT:** Data Extraction, Data Integration, Data Transformation, Data Pipeline Automation, Data Cleansing, Deduplication, Data Reconciliation, Data Quality Validation, Data Mining
- **Cloud Data Platforms and Warehousing:** Snowflake, Azure Databricks, Azure Synapse Analytics, Relational Databases, Dimensional Modeling, SQL Views, CTEs, Window Functions, Query Optimization

- **Analytics, BI and Reporting:** Power BI, Tableau, SSRS, Looker, Alteryx, DAX, KPI Development, Semantic Modeling, Dashboard Automation, Scheduled Data Refreshes
- **Statistical Analysis and Forecasting:** Regression Analysis, ARIMA, Hierarchical Time-Series Forecasting, Exploratory Data Analysis, Demand Forecasting, Variance Analysis, Cohort Analysis, Customer Segmentation
- **Business and Collaboration Tools:** Jira, Confluence, Salesforce, HubSpot, NetSuite, SharePoint, Microsoft Visio, Microsoft Office Suite, Agile Methodologies

Professional Experience

Business Intelligence Analyst – Supply Chain and Market Analytics

Dye Capital & Company | Remote, US | May 2024 – Present

- Built SQL workflows that pull sales, inventory, pricing, product and customer data into clean reporting tables used across the business.
- Automated 20+ SQL reports and Power BI dashboards, using Python (Pandas) for prep and validation, which cut manual reporting work by 40%.
- Rewrote slow, complex queries with CTEs and window functions so revenue, margin, inventory and customer metrics came from one consistent source.
- Implemented validation checks to catch duplicate transactions, missing values, mislabeled products and financial mismatches before they reach a report.
- Designed Power BI semantic models and KPI reports for sales, gross margin, inventory, loyalty and promotions, cutting reporting turnaround by 30%.
- Ran pricing, profitability and year-over-year analyses that pointed to a possible 10% revenue lift from pricing and promotion changes.
- Forecast demand from historical sales and seasonal trends to support inventory and financial planning.
- Worked with Finance, Marketing, Supply Chain and Operations to agree on metric definitions and fix reporting gaps, uncovering about 15% in efficiency gains.
- Developed and maintained SSRS and Excel reports from NetSuite and SQL Server data for Finance and Operations teams.
- Gathered requirements from stakeholders, wrote user stories in Jira, and documented metric definitions and data lineage in Confluence.
- Led root cause analysis on reporting discrepancies and worked with data owners to fix issues at the source.
- Trained business users on Power BI dashboards and self-service reporting, reducing ad hoc data requests.
- Presented weekly KPI and market trend insights to leadership to guide pricing, inventory and promotion decisions.
- Monitored inventory levels, sell-through and replenishment trends to flag stockout and overstock risks for the supply chain team.
- Analyzed price elasticity and margins by product category to support pricing and promotion strategy.
- Evaluated vendor and product performance to support assortment and purchasing decisions.

IT Intern – Data Analyst

Volkswagen Group of America | Chattanooga, TN | Jan 2024 – May 2024

- Automated recurring KPI reports with Python (Pandas) and Excel, cutting manual reporting work by 35%.
- Analyzed IT infrastructure and system performance data to spot anomalies and reliability risks early.
- Ran UAT and data reconciliation to track down reporting defects, reducing repeat reporting errors by 20%.
- Standardized data formats and validated source records so performance tracking stayed consistent month to month.
- Worked with IT Operations and Agile teams on requirements and incident support, helping reduce system downtime by 15%.
- Mapped reporting and IT support workflows in Microsoft Visio to find bottlenecks and process improvement opportunities.
- Maintained Jira tickets and SharePoint documentation for report changes, data issues and UAT results.
- Created Excel dashboards with PivotTables and Power Query to track incident volume, resolution time and system availability.

Market Research Analyst

Changing the Present | New York, NY | Sept 2023 – Jan 2024

- Analyzed donor, campaign and financial data in Azure Databricks, SQL and Snowflake, finding funding trends that helped grow donations by 10%.
- Engineered clean Azure Synapse and Snowflake datasets for donor segmentation and campaign reporting.
- Built reusable SQL datasets and Looker reports that sharpened donor targeting and supported 5% growth in funding.
- Profiled and reconciled donor and financial records to fix missing data and inconsistent categories.
- Cleansed and deduplicated HubSpot CRM donor records to improve the reliability of fundraising and marketing reports.
- Developed Excel and Power Query trackers for campaign performance, donor retention and the fundraising pipeline.
- Presented campaign and donor insights to leadership with clear recommendations on outreach and budget allocation.
- Researched market and peer nonprofit trends to shape campaign strategy and donor engagement.

Data Business Analyst

GM Associates | Hyderabad, India (Remote) | May 2019 – June 2021

- Supported the senior data analyst on government-contract projects, cleaning and validating data for project and financial reporting.

- Wrote SQL queries to pull and combine data for recurring reports and one-off requests.
- Built Power BI dashboards that let project managers track tickets and project progress in one place.
- Applied data mining techniques to identify patterns and anomalies in project and operational data.
- Maintained Excel reports with pivot tables and lookups, making recurring reports faster and more accurate.
- Validated data for duplicates and gaps so stakeholders got reliable numbers.
- Documented data requirements and report specifications with project managers for government-contract deliverables.
- Automated repetitive Excel tasks with macros, cutting time spent preparing recurring reports.

Projects

Hierarchical Revenue Forecasting (M5 Dataset) | Python, SQL, Tableau

- Forecast revenue on the M5 retail dataset across store, state, category, department and item levels.
- Cleaned and joined daily sales, calendar and pricing data in Python and SQL, adding features for seasonality, holidays, events and price changes.
- Developed time-series models and reconciled them so item-level forecasts add up correctly to store and state totals.
- Measured accuracy with MAE, RMSE and forecast-vs-actual comparisons at each level.
- Published an interactive Tableau Public dashboard with drill-downs and forecast-vs-actual views.

Automated ETL Pipeline and Sales Data Warehousing | Python, SQL, Snowflake, Power BI

- Designed an ETL/ELT pipeline that brings sales, inventory, product and transaction data from several sources into Snowflake.
- Automated cleanup in Python (Pandas, NumPy): missing values, duplicate transactions, data types and source reconciliation.
- Wrote SQL views with CTEs and window functions to standardize revenue, inventory and profitability calculations.
- Added source-to-target checks that flag mismatched totals and product mappings before data hits reporting.
- Connected the curated data to Power BI for automated KPI reporting.

Revenue Forecasting and Profitability Modeling | Snowflake, Python, R, Tableau

- Analyzed 60,000+ financial and operational records in Snowflake Notebooks and SQL to understand revenue, profitability and seasonality.
- Used Python and R for EDA, regression and time-series forecasting to measure how demand, pricing and seasonality drive revenue.
- Checked forecast accuracy with MAE, RMSE and forecast-vs-actual comparisons.
- Visualized projections, margins and profit drivers in Tableau, connected directly to Snowflake views.

Customer Behavior and Retention Analytics | SQL, Python, R, Power BI

- Combined transaction history, loyalty enrollment and promotion data into customer-level tables.
- Ran segmentation and cohort analysis in Python and R to understand repeat purchases and buying intervals.
- Defined core customer metrics in SQL: purchase frequency, average order value, repeat rate and loyalty penetration.
- Built Power BI dashboards tracking customer lifecycle, promo response and segment performance, with clear retention recommendations.

Education

Master of Science, Information Systems | George Mason University | Aug 2021 – May 2023 | GPA: 3.90

Bachelor of Engineering, Computer Science Engineering | University of Mumbai | Aug 2017 – May 2021 | GPA: 3.39
